

8M-pitch timing belts have an 8mm curvilinear tooth pitch. They are used in medium drives. We make our 8M-pitch timing belts with a thermoset rubber reinforced with fiberglass.

When considering a 8M pitch in a new drive system, you might also consider a curvilinear S8M (super high torque) rubber belt or the metric trapezoidal T-10 and AT-10 polyurethane belts. For the best performance however, use one of the following belt designs:

- Goodyear BlackHawk Pd™ (improvement on RPP Panther and QT Power Chain®),
- Goodyear Falcon Pd™ (improvement on Gates PolyChain® GT®2),
- Goodyear's Eagle Pd™ helical offset tooth (the most advanced belt design today).

Style	Teeth	Length	Style	Teeth	Length
