

DXL-pitch Dual Sided timing belts have a 0.200" trapezoidal tooth pitch. They are used in small to medium drives.

We make our DXL-pitch timing belts in a thermoset rubber reinforced with fiberglass.

When considering an DXL Dual Sided pitch in a new drive system, you might also consider a metric trapezoidal DT-5 pitch made in polyurethane reinforced with steel. Also consider a metric curvilinear D5M high torque made in rubber reinforced with fiberglass.
