

L-pitch timing belts have a 0.375” trapezoidal tooth pitch. They are used in medium drives.

PUR means that the belt is made with a thermoset polyurethane compound. We typically reinforce our L-pitch timing belts with steel, although we can make a special production to incorporate Kevlar in some sizes.

Belts listed without the PUR suffix means that they are made with a thermoset rubber reinforced with fiberglass.

When considering an L-pitch in a new drive system, you might also consider a metric trapezoidal T-10 or AT-10 pitch. Both are made in polyurethane reinforced with steel. Also consider metric curvilinear 8M (high torque) or S8M (super high torque), both in rubber.
